

 **TECHNOHULL**

SEABORN PERFORMANCE

2018

AT A GLANCE

TECHNOHULL® was founded in 2005. Since then, the yard has designed, produced and sold luxury high performance innovative RIB's — all in-house.

TECHNOHULL® is known worldwide for their impressively fast and safe high-end RIBs

Over the last ten years the experienced and enthusiastic TECHNOHULL® team has expanded in the international boating market, achieving both remarkable and stable growth in production and sales.

TECHNOHULL® has one-of-a-kind aesthetic taste, design & innovation appeal.

TECHNOHULL® with an extensive international network of dealers sells RIBs for pleasure, tenders and demanding purposes : police patrols, military and more!

OUR STORY

TECHNOHULL® is a RIB manufacturer with excellent and innovative design. Adam Younger, a renowned British speed hull designer, joined TECHNOHULL® team and achieved our magnificent model; The sea DNA999.

In 2010, we adapted a new approach, focusing on building an efficient dealers' network & in 2013 TECHNOHULL® under a new and visionary management re-located its production facilities and welcome a very promising trend setting hull designers on board.

DISTINCTIVE FEATURES

Deep cockpit for an absolute dry ride
and safety feeling

Lightweight & durable construction
for outstanding performance

Legal designation of road transportability
for all models up to 10m

Spacious luxury modern design decks.

SEABORN PERFORMANCE

Superior performance is the key result of the design in every TECHNOHULL®. Our boats are:

Fast

Fuel efficient

Safe & seaworthy

Suitable for pleasure

Long distance traveling

Innovative design and solutions combine
unique amenities.

All the right ergonomic features for a sport boat
are there, to enhance and facilitate the long trips
in any weather conditions.

SUPERIOR MATERIALS

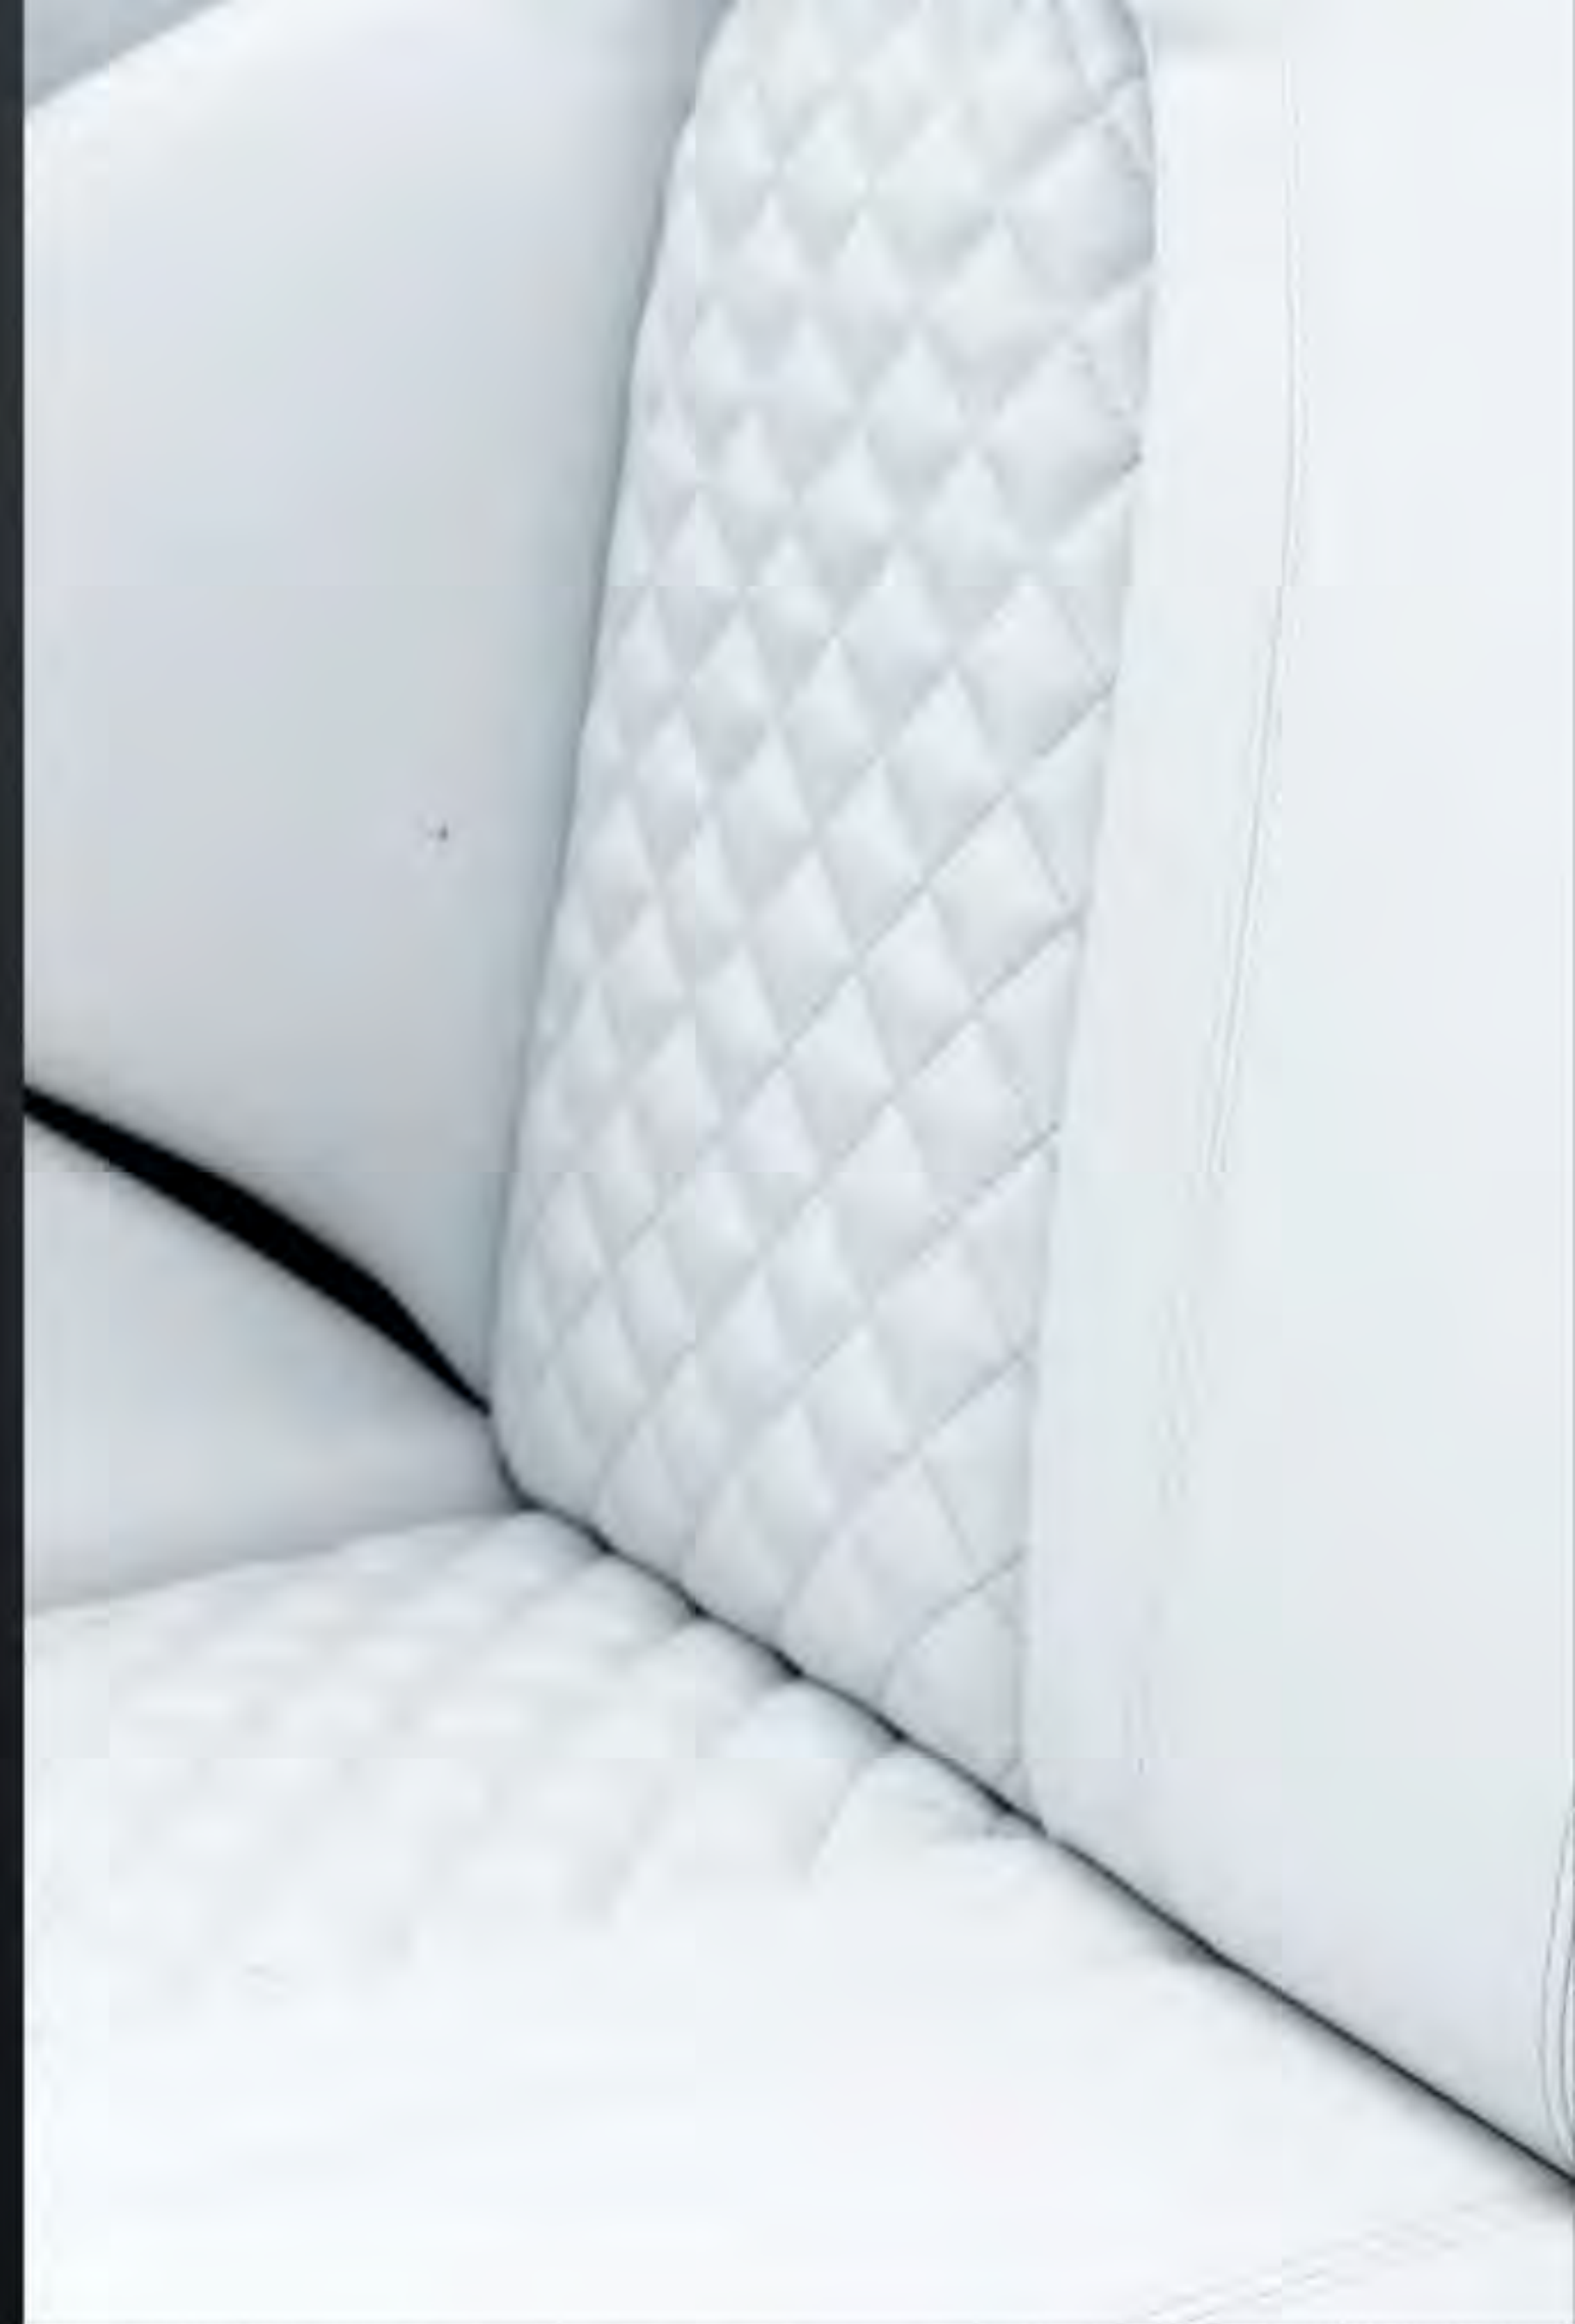

High quality materials are selected in the building and finishing process.

Top quality gel coat colors, multiaxial fibers, high quality resins are standard in every boat.

High technology materials like Airex, Kevlar and other special synthetics are used for durability and maximum strength.

All models are equipped with ORCA Penel Flippo 1670 tubes' fabrics.

Vacuum infusion technology, epoxy materials and of course hand laid polyester is combined in the production process of the GRP parts.

PROVEN PROCESSES

Following the sophisticated hull design, top quality techniques and materials apply through all required processes for building a masterpiece.

True epoxy vacuum infusion lamination with special multi axial fabrics, foam cored layers, finally cured in controlled oven, ensure the absolute best process of building a super strong, lightweight boat.

Many parts are built on pure carbon fiber further reducing overall weight.

At all steps of production ISO 9001:2008 standards are strictly followed.

PEOPLE ABOVE ALL

At TECHNOHULL® everyone involved in the production process takes into constant consideration the work of other sections as a part of a line and parallel production method.

Highly expertise professionals work together and focus on detail for manually craftsmanship to create what we believe an excellent sport utility rigid inflatable boat should be. An experienced Production Manager guides production teams for coordination and support.

OUR MASTERPIECES: HULLS

Every single TECHNOHULL® model is designed from scratch and is based on a different hull to best fit the length, the purpose and the different characteristics of this specific model.

The result is a complete product range with a series of boats which are : very fast, fuel efficient, safe and seaworthy, suitable for pleasure, racing or tender use.

High level of technology has been incorporated in the hull and deck design which makes our boats suitable for Military, Patrol and Navy use, especially in rough seas and hard weather conditions where there is extreme riding/performance demand.
